RE: Pike Systems / Triple S Life Cycles

If the proper CPI microfiber washing instructions (below) are followed, the Triple S microfiber mops are guaranteed for 500 washings.

Position on Bleach:

Bleach has minimal effect on the microfiber fabric itself. Bleach will deteriorate the stitching fabric and backing materials of microfiber products.

If you use bleach to clean or in conjunction with the laundry process you can expect that the life of your mop/number of wash cycles will be reduced. □□ The extent to which this is the case is dependant on the amount used.

In general, a light amount of bleach occasionally in the wash cycle should not have any dramatic impact on the life expectancy of the product □

CPI Triple S Wash Instructions:

Wash Instruction

- Maximum water temperature: 95° (200°)
- Use alkaline detergents with pH under 11
- NO chlorine bleach. Use Oxygen bleach with pH 4.0 to 11.0
- NO Fabric softener

Dry Instruction

- Maximum air temperature: 60° (140°)
- Avoid over drying, remove items once dry
- NO fabric softener sheets
